

We have solutions to limit the spread of harmful bacteria

Hospital stays involving patients infected with *C. difficile* have tripled in the past decade and the number of deaths increased by 400% between 2000 and 2007. These numbers underline the importance of finding solutions to fight these infections.

Hygienic Covers®

Designed for the safe collection, transportation and disposal of bodily fluids. The unique super-absorbent pad included in each bag turns liquid waste into gel within seconds. Used with the Commode Chair, Hygie® Urinal Support and Hygie® Emesis Support.

Hy21® Support

Used with Hygie Hygienic Covers®, the hy21® Bedpan Support replaces the standard and orthopedic bedpans by offering a 2-in-1 design which combines the benefits of both bedpan types. The revolutionary hy21® technology facilitates handling and use for all patients requiring a bedpan.

NEW

Surgical Gloves

Introducing a new line of products used to prevent infection in the operating room. Made of synthetic material, the design incorporates an antimicrobial layer between the inner and outer layers of the glove. When the glove is punctured, an antimicrobial liquid is released, reducing the viral load by 99.99%.

We offer

a range of innovative products aiming to limit the spread of pathogens (*C. difficile*, VRE, MRSA) and hence to reduce the risk of infection.
